

# THE SOCRATIC METHOD OF DESIGNING

**DA-ANTON Steven**

*October 7, 2020*

In plain eyesight, we were primates who evolved through time by adapting to our nature. At the present time, the progress we make as a society and part of humanity made us involve on the 'evolution' of our mankind. In the start of time, our ancestor adapts physically and biologically to the environment — now, we continue to idealize, question, and find answers to satisfy our endeavor of our curiosity — to search for truth.

Socratic Method has existed since it was popularized by Socrates in 300-400BC, and this aims to further expand and re-iterate most of the conservative idea held by the other philosophers. In Design Thinking, it allows an idea to further improve in collaboration of the user — which signifies the interlocutor on Socratic Method discourse.

Personally, Design Thinking allows the field of arts to have an objective methodology and measure effectiveness of the idea based on the consumer, to foresee the area of users who will utilize the solution, to solve a problem, and re-defining and re-aligning the solution for instances that it may not be aligned.
